

Roof terrace

- Flat roof over the room ring as a round terrace around the dome, deck at +7.10
- Deck 4.1 m wide (bench ring to railing)
 - Railing 1.20 m: the facade battens continue up and get a timber handrail
 - Dome on a 45 cm upstand = bench height, keeps feet off the glass
 - Round stair house with a door on each side: you walk through it to go all the way round

- Notes
- Roof built as a walkable flat roof: loads for people ($\approx 4 \text{ kN/m}^2$), falls to internal outlets, deck on pedestals
 - Railing is see-through at an angle only; raise to $\approx 1.8 \text{ m}$ (or add screens) if people want to sunbathe undressed without being seen from further away
 - Stair house doubles as rain shelter; lantern inside
 - Annex keeps its green (sedum) roof, not walkable
