

Open hall $\approx 290 \text{ m}^2$, octagon 20.00 m across the flats
Clear height 3.56 m (3.34 m under the beams)
Only 4 slim columns (steel core $\varnothing 219$ in a $\varnothing 30 \text{ cm}$ timber casing) carry the ring beam around the net
Big windows with deep window seats, garden doors to the south, tea / party bar on the NE wall
Entrance on the north face with canopy, coat benches and a curtain; WCs + showers upstairs

- cut wall (timber frame, clay inside, larch outside)
- timber column / stair trunk
- fire-rated glass drum around the stair
- above: ring beam, beams, stair, windows
- sun spot through dome + net

- Underfloor heating (low-temp., heat pump) in hall and rooms – floors ~26–28 °C, air ~24–26 °C
- Balanced ventilation with heat recovery; vents in the dome crown and stair house for smoke + summer purge
- Clay plaster buffers humidity and sound
- Outside shading on dome and big windows (summer overheating, GEG / DIN 4108-2)

Tempel – seminar building at ZEGG, Bad Belzig · concept v0.3
Scale 1:100 on A2 · dimensions in metres
Not for construction: structure, net and fire safety to be
verified by a structural engineer, a net maker and a fire engineer.
